

### BUILD A MODEL BROOKLYN BRIDGE

Create your own model Brooklyn Bridge by following the instructions below!

### MATERIALS YOU'LL NEED:

- Bridge cut outs (attached)
- Glue
- Scissors

### BEGIN! FOLLOW THESE STEPS:

#### STEP 1

Print out the bridge cut outs, attached. Color if you want, then cut out all the pieces.

#### STEP 2

Glue each of the dotted bridge cable sides to a non-dotted bridge side.

#### STEP 3

Create the towers by folding dotted flaps and gluing to form a rectangle.

#### STEP 4

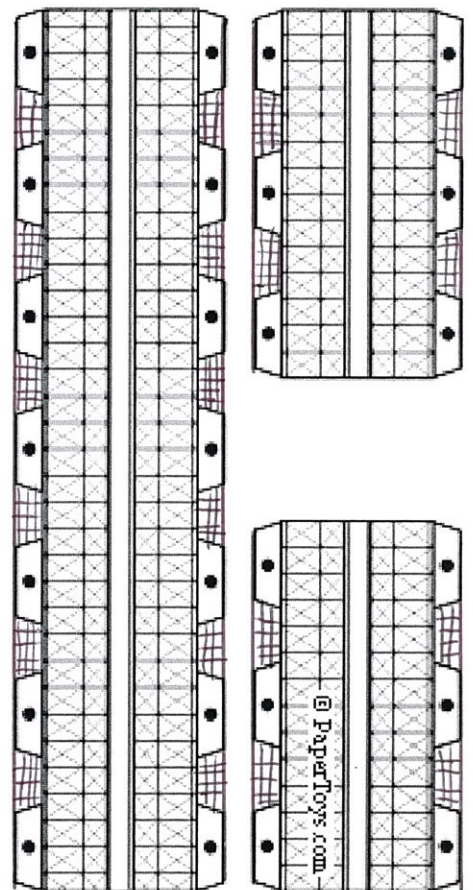

Place both towers on each bridge pole. To do this, glue a tower side (with the dot) to the dot of a bridge pole. Repeat for both towers. Next, fold down the dots on the deck cut out. Glue it in place by matching the deck dots to the bridge cable dots.

#### STEP 5

Lastly, glue the other side of the bridge cables, connecting dots to dots. Option to add staples along the deck for better attachment.
